

BUILD PROGRESS GUIDE

Doubles Vendor

How the game came together, step by step

Built in Godot 4.7 · November 2026

THE JOURNEY

Ten steps from an empty project to a playable game

1

Title screen

Waving flag, cascading menu

2

Arima street

Painted backdrop with the doubles cart

3

Vendor’s view

Zoom in, first customer orders

4

The counter

Every ingredient in its place

5

Mini-games

Sweet spot and arrow catch

6

Celebration

Wining masquerader and confetti

7

Customer pool

Random people from all over T&T

8

Points system

12 points a doubles, with multipliers

9

Five rounds

Ending with a boss customer

10

Shipping

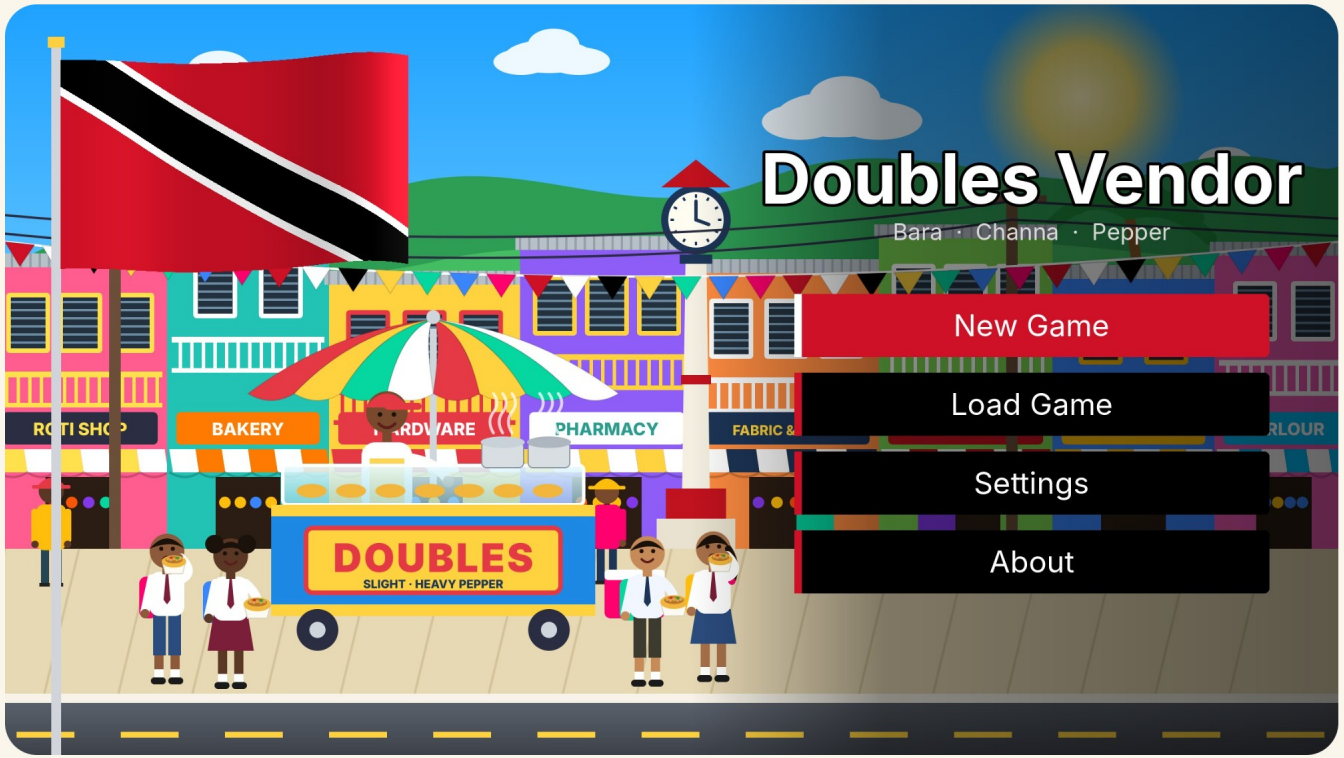

Windows build and a live web link

STEP 1

A title screen with a waving flag

The first thing players see: the flag of Trinidad and Tobago rippling in the breeze.

- The flag is drawn and animated by a shader, so it stays sharp at any size
- Menu buttons cascade down one after another
- “Continue” only appears when a save file exists

STEP 2

A busy street in Arima

A bright backdrop behind the menu sets the scene before the game starts.

- Colourful shopfronts, bunting and the Northern Range
- A clock tower inspired by the Arima Dial
- Schoolchildren eating doubles around the vendor’s cart

STEP 3

Into the vendor’s shoes

Clicking New Game hides the menu and zooms the street toward the vendor, then fades into the game.

- From here on, the player stands behind the cart
- The street blurs softly behind the customer
- Fading through black hides the switch between scenes

STEP 3

The first customer

A test customer walked up and ordered two doubles, the first version of the game loop.

- A man in a suit raised two fingers to order
- Make a Doubles twice, then Serve
- He paid, walked off and came back for another round

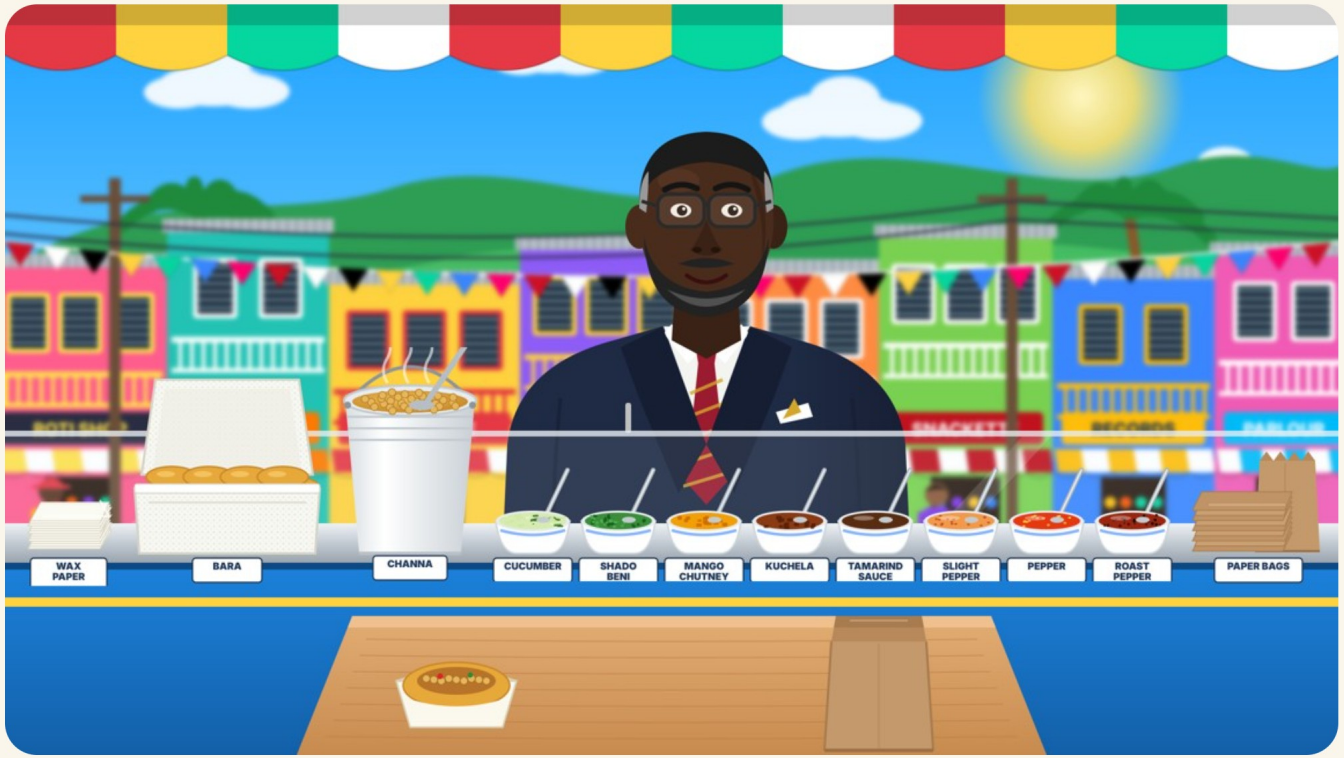

STEP 4

A counter laid out like the real thing

Everything sits left to right in the order it goes on a doubles.

- Wax paper, bara in a styrofoam box, channa in a 5-gallon bucket
- Eight bowls with spoons: cucumber, shado beni, mango chutney, kuchela, tamarind, slight pepper, pepper, roast pepper
- A stack of brown paper bags at the end

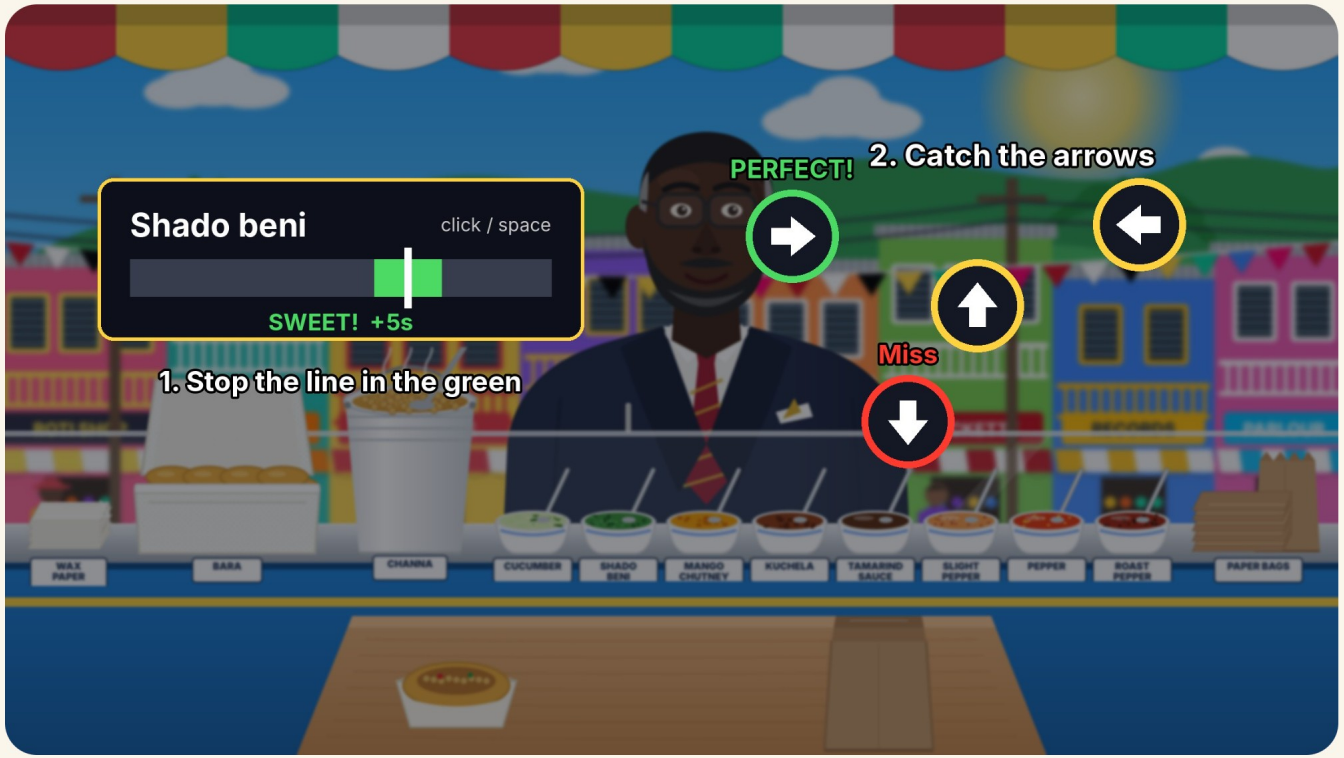

STEP 5

Two mini-games

Clicking the customer's order starts the timer. Every ingredient, and getting paid, is a quick test of timing.

- Sweet spot: stop the moving line in a randomly placed green zone. A hit adds 5 seconds
- Arrows: click each floating arrow or press the matching arrow key
- Fast arrow hits count as PERFECT

STEP 6

A carnival celebration

Each finished round ends with a Round Complete card that waits for a click or key press.

- A masquerader in feathers and sequins, wining
- Confetti in the flag's colours raining down
- Points and money for the round shown up front

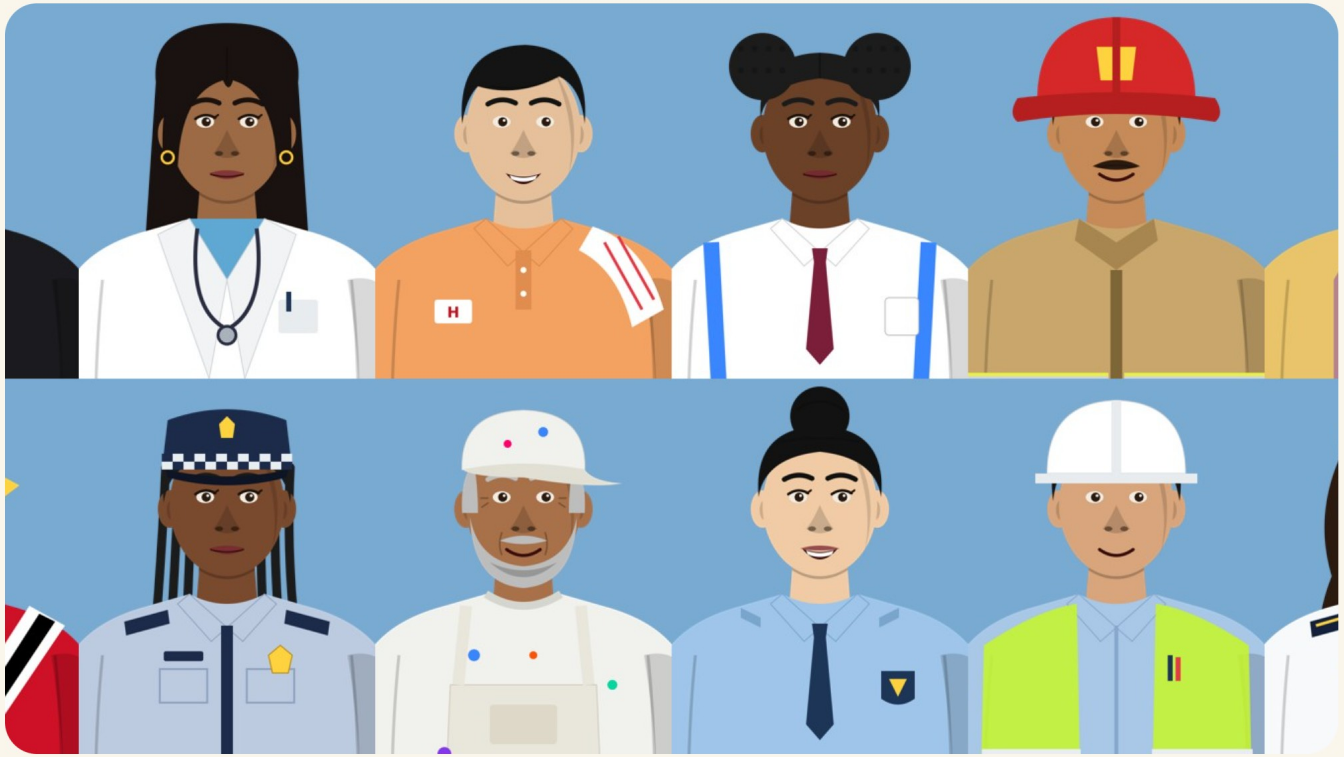

STEP 7

Customers from all over T&T

Every round brings a new random customer, built from mix-and-match art.

- Male or female; Afro-, Indo- or Chinese-Trinidadian, Spanish, or Syrian/Lebanese
- Ages from primary school to 60+, matched to student or job
- 13 jobs, each with its own outfit, from taxi driver to soca artist

STEP 8

A points system that rewards skill

EACH DOUBLES

12 pts

and TT$2.00, paid if at least half the arrows are hit

The multiplier starts at ×1.0 and never drops below ×0.1. It replaced the first version, where bonuses multiplied together and could reach about ×290.

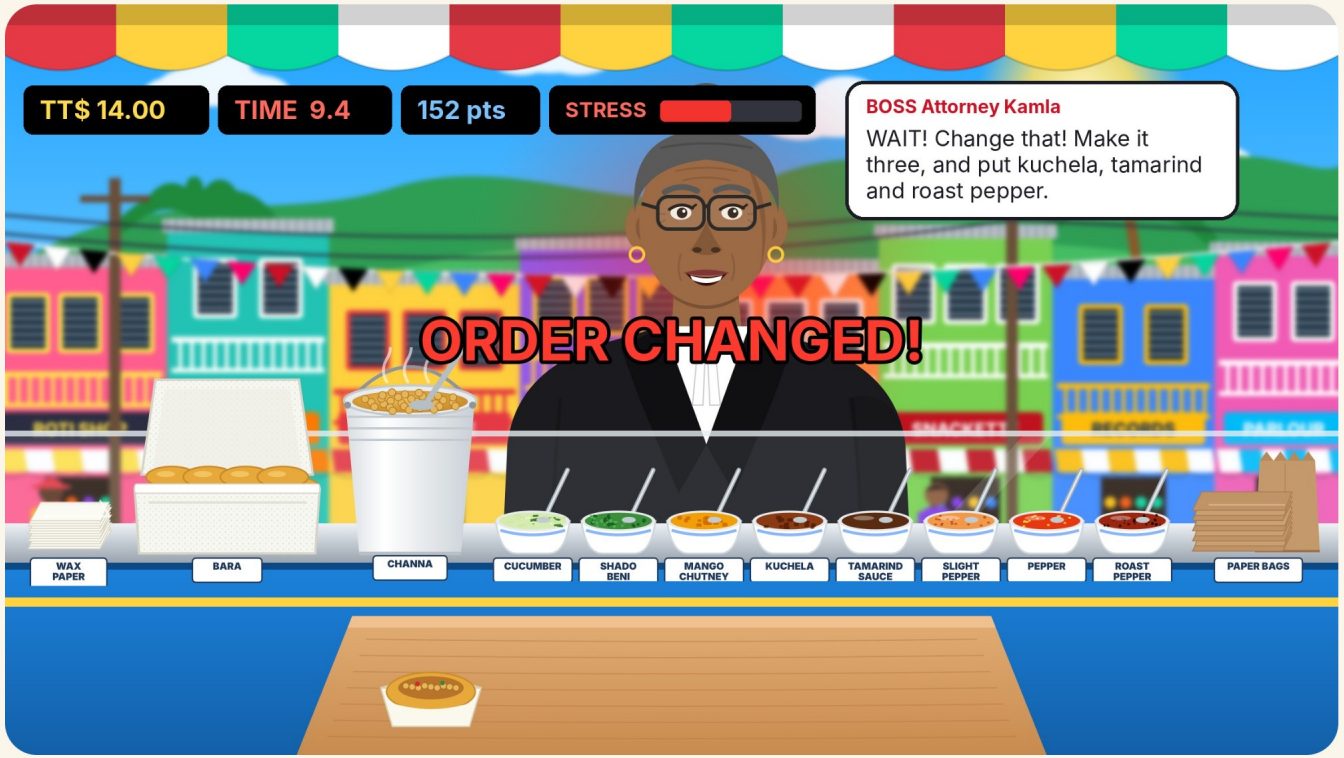

What happens	Multiplier	Type
Each sweet-spot hit	+0.10	Bonus
Each PERFECT arrow	+0.10	Bonus
Finishing fast	up to +0.50	Bonus
A 2nd (or later) sweet-spot miss in a row	−0.15 each	Penalty
Picking a wrong ingredient	−0.10 each	Penalty
Missing an arrow	−0.10 each	Penalty

STEP 9

Five rounds, ending with a boss

Round 5 brings a boss customer who is harder to please.

- 25% less time to make the order
- A stress bar fills with every missed sweet spot. When it’s full, the boss walks off
- Halfway through, the boss changes the order and adds a doubles, with no extra time

STEP 10

Shipping the game

1

Export

Godot’s Web export, saved as index.html

2

Commit

GitHub Desktop turns the folder into a repository

3

Publish

Pushed to GitHub as a public repository

4

Pages

Settings › Pages deploys the main branch

5

Play

Anyone with the link plays in their browser

There’s also a Windows build: Project › Export › Windows Desktop, with Embed PCK turned on, makes a single .exe to share.

From an empty Godot project to a five-round game on the web, in one day.

ALONG THE WAY

Problems we fixed

Problem	Fix
Godot error: “Cannot infer the type of t”	Gave the tween variable an explicit Tween type
Sweet-spot bonus grew out of control (×1.5 per hit)	Switched to +0.5 per hit, then to the points system
Web export named “Doubles Vendor Project.html”	Re-exported as index.html so GitHub Pages can find it
GitHub Pages deploy timed out	Re-ran the deploy and added an empty .nojekyll file

WHAT'S NEXT

Ideas for the next build

Sound and music

Soca on the menu, sizzle and street noise in game

Settings menu

Volume and fullscreen

Save and Continue

Make the Continue button work

Touch controls

Tap instead of hover, for phones

More poses

Customers who wave, point and react
